

## LeanGlobal® Data Sheet

### LeanGlobal® Solutions:

- Manage domestic and international freight in a single TMS system
- Navigate complex global supply chains with ease
- Collaborate seamlessly with supply chain partners
- Improve supply chain visibility
- Reduce lead times and inventory levels
- Access integrated import and export trade compliance

### Summary

LeanGlobal streamlines the process of moving ocean freight to improve performance and reduce cost. It is a module of LeanTMS®, a Software-as-a-Service (SaaS) transportation management system created by LeanLogistics.

### Challenges

The management of international freight is still largely dominated by manual processing. Companies looking for technology solutions find a very short list of providers with the robust functionality needed to manage global logistics in one system. Ocean shippers are left in the dark when trying to track containers and product during an ocean move. It is a very time consuming process to obtain vessel schedules, procure capacity, and communicate shipment details with the ocean carrier. Shippers typically need to use a separate system and workflow for U.S. import and export filing that includes significant duplicate data entry. With a variety of platforms in play, it is extremely difficult to have visibility across the transportation network.

### Solution

LeanGlobal centralizes the planning, execution, and settlement of full container load ocean freight into a single workflow. The electronic data integration with drayage and ocean carriages, trade law compliance and validation, and product tracking allows for easy management on one platform. By automating both import and export processes, companies are able to flow goods easily across international borders while maintaining visibility from port to port. It is a comprehensive solution for planning multi-leg, multi-modal, domestic, and cross-border freight.

“We leverage LeanGlobal® to reach our international goals, which include critical visibility of product on the water both inbound and outbound. Even more importantly, LeanGlobal can help us gain visibility to paperwork and shipments for easy entry and exit of our product as we import and export globally.”

VP of Global Supply Chain,  
MTD Products

A Brambles Company

## Features:

- Single platform to manage global transportation planning and execution from port to port
- Integrated global trade compliance
- Multi-currency ocean freight rating, including carrier surcharges
- Electronic communication with steamship lines and freight forwarders
  - Booking request and confirmation
  - Sailing schedules
  - Shipping instructions
  - Shipment status updates
  - Booking amendments
  - U.S. export/import filing
- WebSettle® for automatic payment

### **Global Trade Compliance**

LeanGlobal ensures compliance with international trade laws eliminating the need for third party involvement.

### **Carrier Connectivity**

LeanGlobal integrates with steamship lines through direct EDI and via INTRTA, the world's largest ocean shipping portal, so shippers can request bookings, send shipping instructions, and track containers electronically.

### **Drayage Management**

Shippers can perform drayage carrier management including contract, carrier performance, and CSA (Compliance, Safety, Accountability) ratings. The system also allows for the creation of drayage loads that are synchronized with the ocean booking.

### **Visibility**

Capture and provide visibility into dray milestones and shipment status updates with reporting features to review total freight cost and performance issues with carriers.

### **Ocean Contract Rate Management**

LeanGlobal captures and maintains contractual rates associated with ocean trade lanes.

### **Import/Export Filings**

The program is connected with U.S. government systems for electronic export and import security filings.

### **Ocean Freight Audit and Settlement**

Shippers can identify freight costs for all loads, regardless of mode, that have not been paid and need to be accrued as well as flag invoices that do not conform to pre-established freight audit parameters.

### **Results**

LeanGlobal customers see a dramatic cost-savings as the system streamlines planning processes, reduces accessorial charges, and increases visibility. Working on a single platform allows users to navigate complex global supply chains with ease. LeanGlobal's analytic reporting feeds actionable intelligence back to the shipper to aid smarter business decisions.

- Improve shipper productivity by 30%
- Reduce transportation costs by 10%
- Reduce administrative workload
- Increase supply chain responsiveness
